Plasmid DNA_from the normalized library NGI_CGAP_Kid3 was.
Plasmid DNA_from the normalized library NGI_CGAP_Kid3 was.
prepared, and ss circles were made in vitro. Following HAP
purification, this DNA was used as tracer in a subtractive
hybridization reaction. The driver was PCR-amplified cDNAs
from a pool of 5.000 clones made from the same library
(cloneIDS 1322376-1323911, 1456007-1456775, and
1500552-1520855). Subtraction by Bento Soares and M.
Fatima_Ronaldo.

Plasmid DNA from the normalized library NCI CGAP Kid3 was
prepared, and ss circles were made in vitro. Following HAP
purification, this DNA was used as tracer in a subtractive
hybridication reaction. The driver was PCR-amplified cDNAs
from a pool of 5,000 clones made from the same library
(clonelDs 1322376-1323911, 1456007.1456775, and
1500552-1502855). Subtraction by Bento Soares and M.
Fatima Bonaldo. Contact: Robert Strausberg, Ph.D.

UT-CP-DUI is a normalized CDNA library containing the
following tissue (8): Primary Lung Epithelial Cells The
following tissue (8): Primary Lung Epithelial Cells The
following tissue (8): Primary Lung Epithelial Cells The
following a constructed according to Bonaldo, Lennon and
Soarse Genome Research, 6:791-806, 1996. First strand
cDNA synthesis was primed with an oligo-dT primer
containing a Not I site. Double stranded cDNA was ligated
to an EcoR I adaptor, digested with Not I, and cloned
directionally into pT773-Pac vector. The oligonucleotide
used to prime the synthesis of first-strand cDNA contains
a library tag sequence that is located between the Not I
site and the (dT)18 tail. The sequence tag for this
library is GGCTGTAGGC.
TAG_SEQ=None found"

Plasmid DNA from the normalized library NGI CGAP Kid3 was
prepared, and ss circles were made in vitro. Following HAP
purification, this DNA was used as tracer in a subtractive
hybridization reaction. The driver was PCR-amplified cDNAs
from a pool of 5.000 clones made from the same library
(cloneIDS 1322376-1323911, 1456007-1456775, and

7 The sequence contained an oligo-dr track that was present in the oligonic electide that was used to prime the synthesis of first strand cDNA and therefore this may represent a bonafide poly A tail. cDNA Library Preparation: M.B. Soares Lab Clone distribution: NCI-CGAP clone distribution information can be found through the I.M.A.G.E. Consortium/LIML at:

// Site 2: Not1; Mouse cDNA project by the Laboratory of Site 2: Not1; Mouse cDNA project by the Laboratory of Genefics, National Institute on Aging (NIA), Intramural Research Program, WIH (http://lgsun.grc.nia.nih.gov/cDNA). Research Program, WIH (http://lgsun.grc.nia.nih.gov/cDNA). In brief, double-stranded cDNAs were synthesized with an Oligo(dT) princer Invitrogen: esynthesized with an Oligo(dT) princer Invitrogen: and programmer Invitrogen: and purified by ethanol-precipitation. The cDNAs were ligated to Lone-linker LL-Sal4, purified by phenol/chloroform, and separated from free linkers by Centricon 100. Then, the CDNAs were amplified by long-range high fidelity PCR using Ex Taq polymerase (Takara) with a primer Sal4-S. The products were purified by phenol/chloroform and Centricon 100. The cDNAs were figested with Sal1 and Not1 enzymes and cloned into Sal1/Not1 site of poWV-SPORT6 plasmid vector. The DH10B E. coli host was transformed with the ligation mixture by the standard chemical method. The average insert size is about 3.0 kb. The library was
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ô
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            449

Denatured RNA was size fractionated on a 1% agarose gel. First strand cDNA synthesis was primed with cligo-dr primer containing a Not I site. Double strand cDNA was size selected according to mRNA size fraction, ligated with EcoR I adaptor, digested with Not I and then cloned directionally into pTTT3 Pac vector. The library tag senience located between the Not I site and the polyA tail	is CCCAC. Tissue was provided by Tim Ratlift."

                                                                                                                                                                                                                                                                                                                                                                                                                               /clone_libe="Sugano mouse kidney mkia"
//clone_libe="Sugano mouse kidney mkia"
//note="Organ: kidney; Vector: phE185-Fi3; Site_1: DraIII
(CACTGTGTG); Site_2: DraIII (CACCATGTG); 1st strand cDNA
was primed with an oligo(dT) primer
[AIGTGGCCTTTTTTTTTTTTTTTT]; double-stranded cDNA was
ligated to a DraIII adaptor [TGTTGGCTACTGG], digested
and cloned into distinct DraIII sites of the pME185-Fi3
vector (5' site CACTGTGTG, 3' site CACCATGTG]. XhoI should
be used to isolate the cDNA insert. Size selection was
performed to exclude fragments <1.5kb. Library
constructed by Dr. Sumio Sugano (University of Tokyo
Institute of Medical Science). Custom primers for
sequencing: 5' end primer CTTCTGCTCTAAAAGCTGCG and 3' end
primer CGACCTGCAGCACA."
